

Privacy Policy for SereneSpace

Last Updated: May 2026

SereneSpace: Mental Health Check-in & Support is built on a privacy-first architecture. We believe your mental health data is deeply personal and should never be exploited. This policy outlines how we handle your data.

1. Data Collection & Storage

We do not collect, transmit, or sell any personal data. All your data—including mood logs, journal entries, and safety plans—is stored 100% locally on your device using Android's Room Database (SQLite). We have no servers, and your data never leaves your phone.

2. Data Encryption

Your privacy is our top priority. All entries made in the Private Journal are secured using AES Encryption before being saved to the local database. This means even if someone gains physical access to your device's database, your journal entries remain unreadable without the encryption key.

3. App Permissions

SereneSpace requests the following permissions to provide core functionalities:

- **POST_NOTIFICATIONS** : Required to send you customizable daily reminder notifications to check in on your mental health. (Android 13+ requires explicit user consent for this).
- **INTERNET** : Used only to open external emergency crisis chat links in your web browser. No app data is ever transmitted over the internet.

4. Third-Party Services

SereneSpace does not integrate with any third-party analytics, advertising, or tracking services (such as Google Analytics or Facebook SDK). We do not track your behavior, screen time, or interactions within the app.

5. Data Deletion

Because we do not store your data on our servers, you have full control. To permanently delete all your data, simply uninstall the SereneSpace application from your device.
